”4 in a row” – fully integrated service around your machine tool

DEAR SIR AND MADAM,

how would it be to receive all the services related to your machine tool from one source? At Egin-Heinisch we make it possible!

Under the motto „4 in a row“ we have bundled and extended our services. In the future, we not only take care of your spindles but also of machine benches, milling heads and more. And that with the same quality and speed that you already know from the Spindeldoctor.

FULLY INTEGRATED SERVICES AROUND YOUR MACHINE TOOL

The main focus is on your machine tool. Our service knows no limit and takes care of every issue, always finding a smart solution. In our work, not only Spindeldoctor but also the

closely related divisions „ServiceCompany“ and „Factory“ are used to full effect. Through close interlocking, we create synergy effects and are able to remove defect units, provide maintenance and deliver or produce spare parts according to sketches or samples – everything within a few days!

SPEED IS THE KEY

Our quickness underlines the quality of our work. We know exactly, that a machine defect takes time and costs money. For that we see ourselves as your competent service provider for all requirements between the manufacturer and you as user of a machine tool.

We not only repair, but also take out maintenance and optimization. With pleasure we take care of the NC rotary tables of your milling and turning machines. Or we make sure, that your milling, rotary and swiveling tables come into excellent condition. Based on the experience of many years as a specialist for spindle axis and bearings we offer you the overhaul of NC rotary tables with mechanical or electric clamping.

OUR SERVICES AT A GLANCE:

- removal of table axis
- transfer to our repair shop
- check of the clamping
- overhaul of the clamping elements (special coating and refabrication)
- check of the rotatory measuring system (replacement or repair)
- replacement of the table bearing, especially cross roller bearings
- polishing of the tabletop / scraping of the slewing ring surface
- assembly including test run (clamping and turning function)
- reinstallation and geometrical control
- restoration of plugs and cables
- if necessary: restoration of torque drive – winding of the electric engine

THE ADDED VALUE OF OUR WORK:

- all operations from a single source: from removing to remounting
- short repair time thanks to our inhouse EH Factory
- improvement of weak points / vulnerabilities

You work with Matec, Kessler, Rückle, LBW or Cytec tables?

In that case contact us via Whatsapp **+49 5625 921024**.

You already know our Spindelshop24? At **www.spindelshop24.com** we provide you with spare parts for spindles and exchange spindles.
